

# LICHT-TECHNIK Motorised solutions for ROBERT JULIAT luminaires

Robert Juliat has recently announced its partnership with Munich-based Licht-Technik Vertriebs GmbH in the provision of motorised solutions for the Robert Juliat range of Fresnel, PC and profile lanterns.

“We are extremely happy with this new business alliance which brings together two of our industry’s leading, high-end brands to offer quality solutions to the market,” says Robert Juliat Sales Director, Claus Spreyer.

The two companies join forces to team Licht-Technik Vertriebs GmbH’s specialised range of motorised yokes, motorised barndoors, colour changers and dimmer shutters with the full range of Robert Juliat Fresnel, PC and profile fixtures. Aimed at theatre and studio installations, the collaboration will benefit these institutions with precise control over their fixtures, alongside huge time-saving measures and greater convenience.

The new motorised Licht-Technik Vertriebs GmbH yokes bring complete remote control to all Robert Juliat Fresnel and PC parameters including the fixture’s pan and tilt, the opening, closing and rotation of barndoors, and all colour changing capabilities.

Excitingly, the new yokes bring the same level of control to all Robert Juliat profile lanterns. Every feature including pan, tilt, zoom and focus, iris, colour changing and, uniquely, shutters can now be remotely. “We are especially excited about the motorised shutter feature,” says Claus Spreyer. “No other manufacturer offers this for 2000W profile spots so we believe we are the only manufacturer to offer customers this level of remote control.”

“The combination of two high-quality product lines enables customized solutions for ‘motorised light’ which did not exist before now,” says Licht-Technik Vertriebs GmbH’s Sales Director, Volker Neuland. “Licht-Technik Vertriebs GmbH looks forward to a constructive cooperation with Robert Juliat.
