

Happy National Day 2019!

Dear Valued Customers,

In celebration of Singapore's Independence and Hari Raya Haji, Total Solution Singapore office will be closed from 9th August to 12th August 2019. We will reopen on 13th August 2019.

Happy Holiday ahead!

Ayrton Diablo

The company has taken on the ambitious challenge of making Diablo the smallest, lightest and most efficient luminaire of its category. With a record output of 19,000 lumens and a total weight of 21.8 kg, DIABLO is a powerhouse of technology that will tempt the most demanding lighting designers. To achieve its objective, Ayrton has miniaturised the framing system while maximizing the performance level. As in other profile luminaires of the product line, the framing section allows accurate positioning of its four shutter blades on a 100% surface area in all positions, so that the user can frame any object regardless of the luminaire's position.

Ayrton's latest innovation, Diablo, is a versatile, feature-rich 300 W profile luminaire based on the ultra-compact Mistral format.

A new ultra-compact high-output 550 W power supply feeds eight additional motors in the framing system, fitting into the original MISTRAL format. DIABLO borrows the same 13-element proprietary optical system delivering an 8:1 zoom ratio with a zoom range of 6.7° to 53°. The 119 mm frontal lens

can produce an extremely uniform flat beam that can render images perfectly in all conditions and at any beam angle.

ARRI SkyPanel

SkyPanel is a compact, ultra-bright and high-quality LED soft light that sets a new standard for the industry. With a design focused on form, color, beam field and output, SkyPanel represents the culmination of more than a decade of research and development of LED technology at ARRI.

Incorporating features of ARRI's successful L-Series LED Fresnels, SkyPanel is one of the most versatile soft lights on the market, as well as one of the brightest. The SkyPanel 'C' (Color) versions are fully tuneable; correlated color temperature is adjustable between 2,800 K and 10,000 K, with excellent color rendition over the entire range. Full plus and minus green correction can be achieved with the simple turn of a knob. In addition to CCT adjustments, other control options are available such as: hue and saturation, gel selection, RGBW, source matching, x,y coordinates, and 16 professional lighting effects programmed into every fixture.

Astera LED

Titan is the ultimate LED tube for filmmakers, TV studios and any creative person. It emits powerful, tunable white with ultra-high color rendering as well as colored light which can be applied to individual pixels or the whole tube. The tube offers unlimited range of usage; indoor or outdoor, AC-powered or on battery, on the go with the AsteraApp, with wired or wireless DMX.

The Most Professional Video Converters Ever Built.

Professional equipment in mission-critical applications is all about reliability and confidence. So we started with a clean sheet, and built what may soon become your most trustworthy piece of equipment.

Introducing the world's first video converters truly designed for the road. Video converters nowadays are used everywhere on professional A/V events, presentations, live shows and tours and often have a critical role. Yet, they are often the weakest link in the signal chain. Low quality connectors, weak enclosure, external consumer-grade power supply, and overall barebones design that all contribute to a generally unreliable piece of equipment. We wanted to change that, so we designed the xVision Video Converters.
